Rolling Bearing Static and Dynamic Rating | SpringerLinkDefinition. Rolling bearing static rating: theoretical bearing load corresponding to a maximum rolling element–race pressure of 4,000 MPa for roller bearings, 4,600 What is the difference between static load and dynamic load?The dynamic load capacity of an actuator refers to how much the actuator can push or pull. Defining Static and Dynamic Loading

Definition of Dynamic and Static Radial Load Ratings - A H RThe basic dynamic load rating C is used for calculations involving the selection of bearings which rotate under load. It expresses the bearing radial load which will Desktop Engineering - How to Calculate Dynamic and StaticWhen comparing bearing suppliers, engineers are often left with few options other than to compare dynamic load ratings and corresponding life calculations
